Art Unit: 2191

DETAILED ACTION

1. This action is in response to the amendment filed on 01/19/2007.

Claims 42-60 are newly added and pending in the application.

Response to Arguments

2. Applicant's arguments have been fully considered.

Specification

3. The specification of this application REMAINS objected to.

The amendment to the specification filed on 1/09/07 has been fully considered. In the amendment filed on 04/01/2004, Applicants amended the specification to claim continuation of an application SN No. 07/663,594. Examiner respectfully requests a further amendment to use root words incorporation by reference in accordance to CFR 37 1.57.

Double Patenting

4. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Omum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Art Unit: 2191

5. Claims 42-48, 49-55, 56-60 are rejected under the judicially created doctrine of obviousness-type double patenting as being respectively unpatentable over claims 1-18 of U. S. Patent No. **6,138,273**.

With regards to Claims 42-48:

Particularly, with the limitation recited in claim 42, its functionality is equivalent to Claim 1 in the patent '273'.

The recitations such as,

"receiving a series of source code instructions expressed in a programming language, wherein at least one of the source code instructions comprises a command and an argument;

in response to receiving a source code instruction having a command and an argument, building at least part of a stack-based execution stream; and after building at least part of the stack-based execution stream, executing the stack-based execution stream;

wherein the operation of building at least part of a stack-based execution stream comprises:

storing the instruction's argument on a stack; determining an address for an object code routine corresponding to the instruction's command; and storing the address for said object code routine on the stack"

are functionality equivalent to the claimed steps in the claim 1 of the patent '273', i.e., the patent's recitations, receiving a source code command input stream, generating an execution stream for storing said subroutine address and associated arguments, arguments are pushed into the execution stream in reverse order (data store in a stack is last in first out), executing a subroutine identified by said subroutine address.

With regards to Claims 49-55, 56-60, same rationale addressed above.
